

Variables and Datatypes

The objective of this exercise is to consolidate your understanding of variables, datatypes, string formatting, and operators.

1	<p>Open the Begin Solution for Exercise 3.</p> <p>C:\Courseware\QACS\Labs\03_Variables_and_Datatypes\Begin\Exercise3Solution\Exercise3.sln</p>
2	<p>All of the code is commented out.</p> <p>Go through all the numbered points (1 to 14), uncommenting each line as you go. In the case of question 10, there are a few lines to uncomment.</p> <p>Almost all of the lines of code have something wrong: either they won't compile or if they compile and run, they give an unexpected result.</p> <p>Point 14 involves setting a breakpoint to confirm the code behaves as expected.</p> <p>For all other code, identify what is wrong and fix it.</p>
3	<p>There is a Hints project if you need some tips.</p>
4	<p>A complete Corrected Solution is provided in the End folder for your reference.</p>
